XOR logic through AVR-GCC

B.Sai Sindhu

1 ABSTRACT

Abstract—**This manual shows how to implement XOR logic through AVR-GCC.**

In the ciruit X and Y are digital inputs, Z is digital output.The equivalent circuit is the logic implementation of XOR Gate.

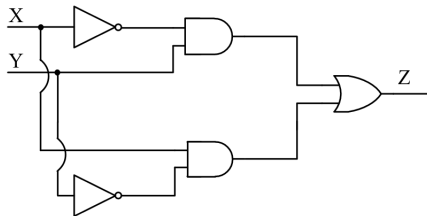

Fig. 1: Z=X!Y+!XY

2 COMPONENTS

Component	Value	Quantity
Resistor	220 Ohm	1
Arduino	UNO	1
Seven Segment Display		1
Decoder	7447	1
Jumper Wires	M-M	20
Breadboard		1

TABLE I

1.The figure given below is the pin diagram of Seven Segment Display.

Fig. 2

2.The table given below is the connections between 7447 BCD Decoder and Seven Segment Display

7447	$\bar{a}$	$\bar{b}$	$\bar{c}$	$\bar{d}$	$\bar{e}$	$\bar{f}$	$\bar{g}$
Display	a	b	c	d	e	f	g

TABLE II

3.The diagram below shows the pin diagram of 7447 BCD Decoder.The output pins of 7447 is connected to Seven Segment Display using Table 2.

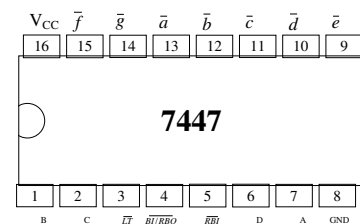

Fig. 3

3 Procedure

1. connect the circuit using 7447 BCD-Seven segment display decoder and Arduino

2. connect the seven segment pins to 7447 using Table 2.

3. connect pin A of 7447 to D2 of Arduino and connect remaining pins B,C and D to GND.

4. connect pins 8,9 of Arduino to Vcc(high) and change to GND(low) simultaneously.

5. Verify the XOR operation in AVR-GCC using the following code and making pin connections according to fig 2,3 and Table 2.

Observe the circuit and verify the program by executing the link provided below.
